Hiring Team

Dear Hiring Team,

As a woman with experience in software quality assurance and large language model training, I possess a unique combination of skills that will make me a valuable asset for a development, database or QA position with your company.

My quality assurance experience stems from the remote/hybrid Software Quality Assurance Analyst Co-op position at Unitron, a Sonova brand. I spent a total of sixteen months experiencing the entire agile software development lifecycle, from monthly Sprint planning meetings to conducting manual regression and release testing on mobile and PC software. A colleague at Unitron taught me about their responsibilities as the lead test automation engineer and allowed me to assist in the debugging process on Ranorax.

I currently work for Outlook as an AI Trainer, as needed. When projects are available, I create complex prompts for the large language model to analyze, and I fix the responses in accordance with the provided guidelines. I've worked on models focused on science, business analytics, and programming assistance. During my education, we worked with TensorFlow, Pandas, and Llama libraries and data pipelines to develop LLMs for data labelling, classification, and localization of image-based data sets.

I would be thrilled to bring my knowledge and experience to your company. My combination of experience, attention to detail, and ability to retain knowledge expeditiously will enable me to contribute effectively to your team. My passion for continuous learning will make me a valuable asset, and I look forward to the opportunity to work with your company, which is dedicated to excellence.

Sincerely,

Nicole Milmine
