To Whom It May Concern,

As a woman with a background in academia and experience in software testing, I have a unique combination of experience that will make me indispensable to any team.

Six educational terms at the University of Waterloo for Honours Physics and Astronomy before switching to Computer Programming and Analysis at George Brown. With advanced problem-solving and critical thinking skills developed in maths and physics courses, completing a computer programming degree was an enjoyable and straightforward path. Three co-op terms through the University of Waterloo working for Unitron, a Sonova brand. Split between their mobile and software departments as a Software Quality Assurance Analyst, effective communication and attention to detail were required to meet software and safety requirements deadlines.

Thank you for taking the time to consider my addition to your department. My unique background allows me to integrate quickly and seamlessly into any team. I look forward to hearing from you and learning more about the position.

Sincerely,

Nicole Milmine
